

Wind Energy Comes Out on Top

Wind energy has spiked to the top of the list of U.S. utility-scale clean energy resources for the first time this year, surpassing hydropower for first place. This is a big accomplishment for the wind industry, considering hydropower currently accounts for a 7% share of total U.S. electricity generation. With both wind and solar growing steadily, forecasts predict that renewable generation will comprise 18% of the U.S. energy mix this year and grow to nearly 20% in 2020. In addition, the Energy Information Association (EIA) predicts that natural gas-fired generation will increase, while coal-fired and nuclear generation are expected to decline. It's a clear signal that state and federal policies to support the development of new renewables are making significant advances toward a cleaner environment.

MC2 Supports Clean Parks Initiative

The MC2 team joined the Chicago Parks Foundation for “It’s Your Park Day 2019” to celebrate and help clean up community parks. The team met at Gompers Park on the northwest side to mulch plant beds and remove trash around the park, helping to promote a clean environment. Park clean-ups can be a fun and easy way to become part of a group effort to serve the community. Clean parks motivate people to go outside and get some exercise. A little help goes a long way, and MC2 was happy to assist!
